MANAGEMENT AND LEADERSHIP

Environmentally Preferable Products and Services

We began this business with the goal of trying to decrease the number of cars on the road through advocacy and sales of new personal transportation technology that is beneficial to the environment, beginning with the Solowheel, and soon adding more regenerative battery powered solutions.

Environmentally Preferable Purchasing

We only purchase printed marketing materials that are generated with a waterless print process that saves water, reduces air pollution, conserves trees and decreases waste. We also use SFI (Sustainable Forestry Initiative) certified paper that is elemental chlorine free.

WASTE

Solid Waste Reduction and Reuse

We utilize mostly digital materials to market our products to minimize paper use.

ENERGY

Renewable Energy

Our warehouse facility uses solar energy generating ~1,200 kWh/month, sending excess energy back to the powergrid.

TRANSPORTATION

Employee Commute

Our contractors work from home, eliminating any commute.

Fleet Vehicles

We generally use our flagship product, the Solowheel, an entirely electric personal transport, in conjunction with public transit to travel to all events.
